**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 11, line 3, "the metal sheet" is changed to the --metal sheet layer--.

In claim 13, line 2, "electrical contact" is changed to --a electrical contact--.

In claim 13, line 3, "the centre conductor" is changed to --a centre conductor--.

In claim 14, lines 1-2, "Antenna device according to claim 1" is changed to --Antenna device according to claim 13--.

In claim 19, line 2, "wherein the external feeding" is changed to --wherein a external feeding--.

In claim 23, line 1, "Array antenna according to claim 18" is changed to --Array antenna according to claim 19--.

***Allowable Subject Matter***

2. Claims 1-23 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-23 is the inclusion of the limitations of the device additionally comprises a feeding line in the metal sheet layer, which feeding line comprises a feeding part, with a first end and a second end,

and gaps separating the feeding part from the surrounding metal sheet layer by a certain distance, where the slotline is intersected by the feeding line wherein the antenna device is made from a sheet of metal, forming the metal layer. it is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Schnetzler (U.S. Patent No. 5,519,408) teaches a radiating tapered notch antenna is fed by a section of slot slotline, which in, turn is fed by a coplanar waveguide. Wherein he center conductor of the coplanar waveguide terminates on the slotline conductor opposite the ground conductor of the coplanar waveguide. One slot of the coplanar waveguide becomes the feeding slotline for the notch, and the other slot terminates in a slotline open circuit. However, Schnetzler does not disclose or suggest the device additionally comprises a feeding line in the metal sheet layer, which feeding line comprises a feeding part, with a first end and a second end, and gaps separating the feeding part from the surrounding metal sheet layer by a certain distance, where the slotline is intersected by the feeding line.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
